DETAILED ACTION

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The present abstract is longer than 150 words and must be amended.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 6, 10, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Malaval (4,860,697).

Malaval discloses a tube support device (see col. 1, lines 8-13) including a longitudinally extensive strip (7) having a plurality of successive transverse rows located at successive longitudinal locations along the strip (7), each row having a plurality of raised tube engaging zones (16) on each face of the strip (7), extending laterally outwards from both faces of the strip (7) to engage with tubes

Application/Control Number: 10/848,903 Page 3

Art Unit: 3753

(4) in the tube bundle on opposite sides of a tube lane (Fig. 3), the raised tube engaging zones (16) comprise longitudinally extensive corrugations which extend outwards (Fig. 3) from their respective face of the strip (7).

4. Claims 1, 3, 5, 6, 10, and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Wachter (5,072,786).

Wachter discloses a tube support device (see Figs. 4 and 5) including a longitudinally extensive strip (31) having a plurality of successive transverse rows located at successive longitudinal locations along the strip (Figs. 3 and 4), each row having a plurality of raised tube engaging zones (43, 44) on each face of the strip (31), extending laterally outwards (Fig. 5) from both faces of the strip (31) to engage with tubes (41 and 42 in Fig. 5) in the tube bundle on opposite sides of a tube lane (Fig. 5) and on opposite sides of the strip (31), the raised tube engaging zones (43, 44) comprise longitudinally extensive corrugations (formed as bow springs, see col. 4, lines 64-68) or dimples (see 43 and 44 in Fig. 5) which extend outward (Fig. 5) from their respective face of the strip (31).

5. Claims 1-3, 6, 10-13, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Roffler (4,160,477).

Roffler discloses a tube support device (see Fig. 1) including a longitudinally extensive strip (7) having a plurality of successive transverse rows located at successive longitudinal locations along the strip (Figs. 1), each row

Application/Control Number: 10/848,903 Page 4

Art Unit: 3753

having a plurality of raised tube engaging zones (30) on each face of the strip (7), extending laterally outwards (Fig. 1 and 4) from both faces of the strip (7) to engage with tubes (4) in the tube bundle on opposite sides of a tube lane (Fig. 1) and on opposite sides of the strip (7), the raised tube engaging zones (30) alternately extending outwardly from one face of the strip and the other (see Figs. 1 and 4), the tube engaging zones comprising longitudinally extensive corrugations (Figs. 1 and 2) which extend outwards (Fig. 2) from their respective face of the strip (7), the tubes being arranged in triangular formation (Fig. 1).

- 6. Claims 4, 7-9, and 14-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jabsen (3,933,583), Beuchel et al (4,175,003), Jabsen (4,359,088), Ringsmuth et al (4,570,703), and Anthony (4,781,884) are cited to show anti-vibration support members.
- 8. The information disclosure statement filed 9 August 2004 fails to comply with 37 CFR 1.98(a)(1), which requires the following: (1) a list of all patents, publications, applications, or other information submitted for consideration by the Office; (2) U.S. patents and U.S. patent application publications listed in a section separately from

Art Unit: 3753

citations of other documents; (3) the application number of the application in which the information disclosure statement is being submitted on each page of the list; (4) a column that provides a blank space next to each document to be considered, for the examiner's initials; and (5) a heading that clearly indicates that the list is an information disclosure statement. The information disclosure statement has been placed in the application file, but the information referred to therein has not been considered.

The form PTO 1449 that was stated to be attached to the paper was not received.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa J. Walberg whose telephone number is 571-272-4790. The examiner can normally be reached on M-F 9:00 - 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Mancene can be reached on 571-272-4930. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
